

Replacement Domes for Skylights

Replace your storm damaged, broken, or discolored domes with new single or sealed double domes to bring to life, and clarify, back to your skylights.

Maxim offers acrylic or polycarbonate replacement domes to meet most applications. Dome colors are available in **Clear, Bronze, Gray, & White** with varying degrees of light transmission. All double dome sets are permanently sealed to help prevent moisture from appearing between the domes. Just fill out the checklist on the other side.

ACRYLIC DOMES

Good resistance to long-term exposure of extreme weather from the beach with scorching sun and salt water to the bitter cold mountains and heavy snow loads.

POLYCARBONATE DOMES

Provides the same protection from extreme weather environments as acrylic, but polycarbonate is 30 times stronger than acrylic so it is **virtually unbreakable!** Polycarbonate also offers 99% UV protection, forced entry protection, and is available in the same colors as acrylic. Replace your domes with polycarbonate and stop worrying about the next hailstorm or windstorm breaking or damaging your skylight domes.
